

Hubbell Ltd
International Project List

Registered Office:
Mitre House
160 Aldersgate Street
London EC1A 4DD
England, UK

Hubbell Inc is an American owned company, specialising in manufacturing and sales of electrical equipment throughout the world. Hubbell Inc is made up of several reporting divisions, including HCE (Hubbell Construction and Energy). Hubbell Ltd was established in the United Kingdom in 1960, and is a part of Hubbell Inc.

Hubbell Ltd trades as Chalmit and Hawke International. Both of these organisations started as local, independent businesses which grew successful in providing products for use in the hazardous area market place.

Hawke first traded in 1955, manufacturing cable glands, growing to supply termination solutions, enclosures, control stations and connectors.

Chalmit recently celebrated their 100th anniversary of manufacturing in Glasgow, first developing equipment for the marine industry, now a major supplier of lighting equipment to the oil and gas industry.

Having bought Chalmit from the Whitecroft group in 1995, Hubbell added to their expanding hazardous area portfolio by purchasing Hawke International in 2002.

Since then, with innovation as a key driver, both companies have continued to grow, developing products in line with customer expectations, gaining worldwide approval and credibility for manufacturing goods suitable for the testing conditions of hazardous locations and hostile environments. Products are manufactured to superior design allowing easy installation, using long life materials, produced under rigorous quality standards. Both companies hold ISO 9001 certification, with Chalmit being also certified to the ISO 14001 and 18001 standards.

Chalmit light fittings and the Hawke range of products have been tested to meet the internationally required standard approvals for use in hazardous areas across the world. These standards included Atex, IECEx, INMETRO, and TRCU (EAC). All products also carry the CE stamp proving accreditation to the European harmonised standards.

Historically, products were predominantly used on onshore and offshore oil and gas exploration, production and processing facilities. Additionally, with the expansion of the renewables power industries, both organisations have had their products used on prestigious offshore windfarm installations, biomass warehouses and are suppliers to the nuclear industry.

Head offices are based in the United Kingdom, with subsidiary offices in Singapore, Houston, the United Arab Emirates. Customer focused area sales managers cover the world from the Americas to Australia, Europe to Asia, and Africa to the Middle East.
