FOR IMMEDIATE RELEASE

Wiegmann Introduces Corner Wire Trough

South Bend, Indiana September 29, 2020 –Wiegmann introduces a line of Corner Wire Troughs. These new products provide extra flexibility for commercial and industrial electrical installers. Wiegmann, part of Hubbell Commercial Construction, provides innovative electrical products to OEM, industrial and commercial markets.

Wiegmann's new electrical enclosures provide new options for wire distribution installations. The new Corner Wire Trough series is wall or ceiling mounted. Mounting in any corner takes up less room on the wall. The design allows conduit runs through six sides of the trough with no need to bend conduit. The angled cover provides wide open access during installation, making it easier to pull wires.

The most unique benefit of Wiegmann's Corner Troughs is the availability of knockouts. Six sizes offer concentric knockouts on the front and bottom for fittings with trade sizes from ½" to 1". Additionally, the stainless steel screws securing the angled cover do not have to be fully removed to remove the cover itself.

Wiegmann's versatile new trough line is available in 23 different sizes. These products save time and cost for installers. These painted steel enclosures are NEMA 1 rated and UL Listed. Perfect for use in industrial or commercial facilities.

Availability of Wiegmann Corner Troughs begins in October 2020. Find more information at www.hubbell.com.
