AccelTex Solutions has engineered and manufactured Wi-Fi products for educational settings. From K-12 to college campuses, AccelTex Solutions has the product and wireless industry expertise to ensure that the correct Wi-Fi solutions are installed the first time.

We have a variety of antenna types available based on location and RF coverage needs. Our antennas are slim which makes them aesthetically pleasing. We can recommend the right antenna for your specific environment.

Our enclosures are durable for any location in an educational setting such as classrooms, gymnasiums, lecture halls, outdoor campus sites and more.

We have enclosures that are guaranteed to protect your valuable Wi-Fi equipment from tampering, stealing and inclement weather.

We can also develop customized solutions that can combine enclosures with antennas all into one comprehensive product that is easy as "plug & play" after connecting to an access point.

With the recent pandemic, AccelTex Solutions has responded with solutions that extend the RF coverage into school parking lots - allowing for faculty and students to connect from a safe distance.
