

Acme Electric®

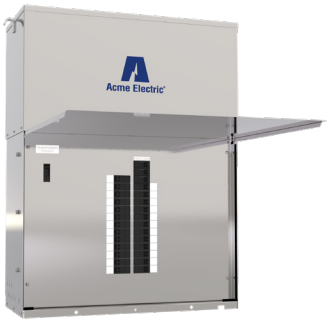

POWEROHM®

Power Distribution & Grounding Solutions

For Packaged Generator Applications

Simplify Integration. Protect Critical Equipment. Support Reliable Backup Power.

Skid mounted generator systems require reliable power distribution and grounding solutions to protect personnel and equipment, simplify design, and support mission-critical operations. Acme Electric and Powerohm provide complementary solutions for generator integrators serving data center and other critical power applications.

Panel-Tran® Zone Power Center

An integrated transformer and panelboard solution that simplifies power distribution for generator skids.

- Consolidates transformer and panelboard into one solution
- Helps reduce design complexity and saves space
- Simplifies installation and integration
- Supports auxiliary and distribution power requirements

Neutral Grounding Resistor

Designed to limit fault current between the generator or transformer's neutral and ground, reducing the potential for equipment damage during a ground fault.

- Significantly reduces overvoltage ground fault current
- Increases protection of critical electrical equipment
- Reduces downtime and maintenance expenses

High Resistance Grounding Resistor

Designed to limit fault current between the generator or transformer's neutral and ground while allowing continuous operation during the faulted condition.

- Reduces transient overvoltages and the potential for equipment damage during a ground fault
- Provides a warning alarm signal when a ground fault occurs
- Reduces downtime and facilitates quicker location of electrical faults

Why Generator Package Manufacturers Choose Hubbell

Simplify Power Distribution
Integrated Panel-Tran® solutions help streamline generator skid design and reduce component complexity and installation time

Protect Mission-Critical Systems
Grounding solutions help safeguard backup power equipment from damaging ground faults

Support Data Center Reliability
Designed for the critical power infrastructure that supports modern data centers and other high-availability facilities

One Source, Multiple Solutions
Access power distribution and grounding expertise from trusted Hubbell brands through a coordinated solution approach

Recommended Applications

- Data Center Incoming Power Systems
- Micro Grid Primary Power Systems
- Backup Power Skids/Genset Packages
- Standby Power Systems
- Mission-Critical Facilities
- Critical Power Infrastructure

Helping Generator Package Providers Deliver Reliable Power

Acme Electric + Powerohm

Power distribution and grounding solutions engineered for generator skid applications

Contact your Hubbell representative to discuss your next generator package project.

Acme Electric® | POWEROHM®

For more than 100 years, Acme Electric has used our design and manufacturing expertise to craft dependable power distribution systems.

Powerohm is a world-class, customer-driven manufacturer of power resistor products. Our team is committed to providing the highest value, highest quality product at attractive prices.
