MATRIX®

One Product Family multiple configurations, Matrix optimizes performance, flexibility, output, efficiency and value. Offered in four mounting options, Matrix is ideal for high mounting height applications such as large parking areas, retail centers, distribution centers and perimeter lighting. Outputs begin at 30,000 lumens with maximum output exceeding 60,000 lumens.

Beacon Products' exclusive Strike Optics for Matrix deliver category leading performance. By maximizing target efficiency, Matrix ensures simple layout design that is high in uniformity and minimal in light trespass. This control reduces energy consumption, lowers installation costs, and improves visual acuity.

Advanced luminaire design separates Matrix from other area and site products. Matrix is designed for sustained, long-term performance with advanced thermal management, an elegantly simple heat sink and industry leading surge protection.

SiteSync™ and Energeni integrated controls provide outstanding performance with an exceptional value. Pre-commissioned and simple to use, Matrix controls give the most novice of users the ability to create robust control schedules for maximized energy savings.

APPLICATIONS

HIGH MOUNTING HEIGHT

LARGE SITE

PERIMETER FLOOD

MATRIX[®]

PERFORMANCE
VALUE
FLEXIBILITY

Matrix combines superior luminaire design with excellent versatility, performance and value. Standard and specialty distributions make the Matrix the choice for high lumen, high mounting height applications with outputs exceeding 60,000 lumens. This enables higher foot candle averages and improves uniformity compared to legacy 1000 watt HID systems. Control options featuring **SiteSync™**, Energini, and occupancy controls enable optimum energy-savings and customization.

Upswept Arm

Post Top

Knuckle

Mast Arm

Matrix flood with knuckle for large area applications. These luminaires are designed as direct replacements for 750 to 1000 watt HID luminaires with beam spreads to meet a variety of floodlighting requirements.

AREA/SITE

FLOOD

OPTICS STRIKE Precision Wins.

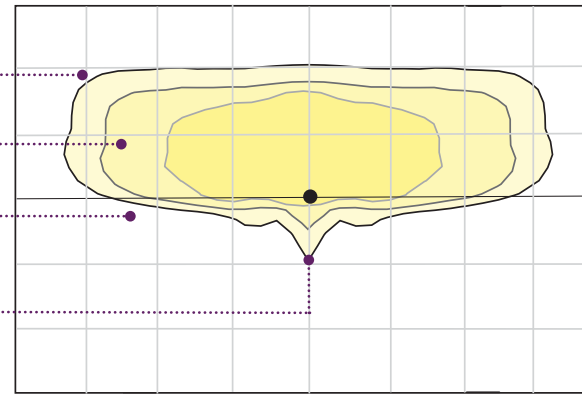

Wide, squared off corners simplify layout design and greatly improve uniformity by reducing contrast in transition zones from one luminaire to the next

Even distribution of intensity improves visual acuity

Wider illumination at the curb line allows for increased pole spacing: reducing material, installation, and operating costs

Low percentage of spill light at house side saves energy and reduces light trespass issues.

Matrix Strike Optic

2x2

4x4

6x6

SPECIALTY OPTICS Automotive Front Row and Tennis Court

Front Row Applications

Type FR

The front row optic provides maximum illumination and performance for highlighting dealership inventory and merchandising the "Front Row." The modern car dealership has evolved and so has lighting it.

- Maximum illumination specifically targeting the front row display
- Tremendous "house side" cutoff behind the pole to maximize the impact of front row merchandise and minimizes light trespass to adjoining properties
- Excellent lateral spread to increase pole spacing

Tennis Court Applications

Type TC

Specifically designed to enhance player and spectator experience in athletic venues, such as tennis courts and other specialty sport applications.

- Provides maximum illumination specifically targeting the court area
- Excellent uniformity and light levels

INTEGRATED CONTROLS

SiteSync™ delivers flexible control options for reducing power consumption and minimizing maintenance costs while delivering the right light levels with a simple and affordable wireless solution.

energent

ENERGENI lighting control is a simple way for owners to save money by dimming the fixtures during unoccupied hours. ENERGENI has flexible setting options to work with fixtures activated by photocontrols or time clocks. The delay and dimming level options can be configured at the factory or reconfigured at will in the field without the need for special cables or computers.

Occupancy Sensors

Sensors control light output based on area utilization. Use for energy savings and local code compliance. (see control options)

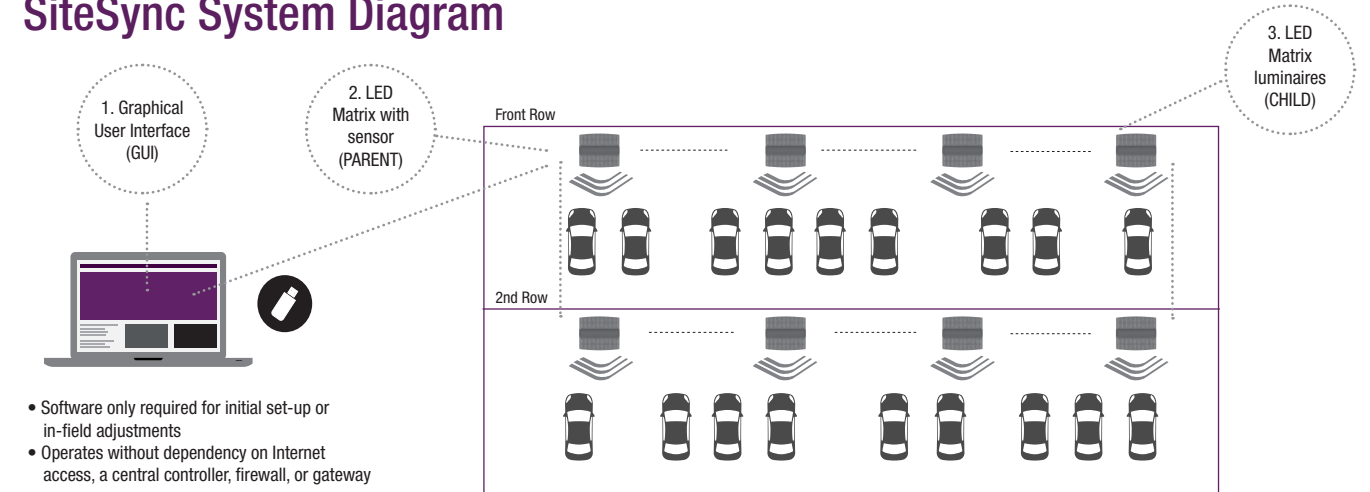

Simple, Reliable and Affordable... With SiteSync's pre-programmed approach, installation becomes a quick and easy process, greatly reducing the complexity, time, and cost compared to typical field commissioning.

SiteSync is based on a wireless mesh network architecture that enables luminaires to operate independently without the need for web based connectivity. This provides a cyber safe platform that delivers reliable communication and control versus other gateway based systems. With a complete offering of Hubbell Lighting site and area, decorative, garage, wall, and flood LED luminaires available with SiteSync, you have the flexibility to create an intelligent outdoor lighting package that will meet a wide variety of application needs.

SiteSync System Diagram

- Software only required for initial set-up or in-field adjustments
- Operates without dependency on Internet access, a central controller, firewall, or gateway

FOR MORE INFO: www.hubbell-automation.com/products/sitesync/

Energeni

ENERGENI has flexible setting options to work with fixtures activated by photocontrols or time clocks. The delay and dimming level options can be configured at the factory or re-configured at will in the field without the need for special cables or computers.

SETTING OPTIONS

ENERGENI has 32 pre-programmed functional settings that can be selected with its five DIP switches. The combination of switch settings allows for options of set dimming, timed dimming with a simple delay or timed dimming based on hours of operation or time at night.

SET DIMMING

The set dimming option allows for a pre-set dimming level that occurs immediately after turning on the fixtures. This setting is ideal for applications where you want the flexibility to adjust light levels after installation.

DIMMING BASED ON TIME OF NIGHT

For applications looking for set dim level at night due to local code requirements or business operation, ENERGENI can be set to dim at approximately the same time each evening.

DIMMING BASED ON HOURS OF OPERATION

For applications that may want the lights to burn for a set number of hours, the ENERGENI can be set to dim after a fixed time has passed. Multiple delay and brightness options are available.

Occupancy Sensors

Controls in area/site applications save energy, extend luminaire life and allow customizable solutions.

SCP

- Programmable occupancy sensor with wireless configuration (ordered separately)
- Includes Photocontrol functionality
- Wide lens available
- For mounting heights up to 40 ft.

WSP

- Occupancy sensor with photocontrol functionality included
- High voltage 347-480V applications
- For mounting heights up to 40 ft.

SCL

- Low voltage occupancy sensor for use with external control systems enabled via 7 pin receptacle (7PR)

¹ Not available with 50M or 50W distribution.
² Not available with other sensor or wireless control options.
³ Specify routine setting code (example GENI-04). See ENERGENI brochure and instructions for setting table options.
⁴ Photocell included with sensor, additional photocontrol not recommended.
⁵ Order at least one SCPREMOTE per project location to program and control
⁶ Specify group and zone at time of order. See www.hubbell-automation.com/products/sitesync/ for more details. Order at least one SiteSync interface Accessory SWUSB or SWTAB. Each option contains SiteSync License, GUI, and Bridge Node.
⁷ Specify group and zone at time of order. See www.hubbell-automation.com/products/sitesync/ for more details. Order at least one SiteSync interface Accessory SWUSB or SWTAB. Each option contains SiteSync License, GUI, and Bridge Node.
⁸ Limited to applications requiring 30° tilt or less. If higher angle tilt is required use flood version with glass cover.
⁹ Not available on K or PT2 mountings
¹⁰ Requires 7PR-SC photocell receptacle. Include SCL/40F if occupancy sensing is required
