Lighting should be simple. Easy and intuitive to interact with, yet versatile enough to give you the freedom to choose. That is what Hubbell Lighting's SpectraSync™ technology is: intuitive, versatile and easy to install.

- easy to install and specify
- competitively priced color tuning solution
- single driver capability
- universal control options with a scalable design
Your Space.

Control your space based on the needs of the application, specific activities throughout the day and preferences of the occupants with three distinct SpectraSync™ Color Tuning Technologies.

Tunable White
Tunable White offers you the ability to tailor correlated color temperature (CCT) to your personal preference, enhancing task visibility, material and colors and the aesthetics of the space. (Available with 2700K-5000K or 2700K-6500K)

Dim to Warm
Dim to Warm mimics the familiar warming effect that occurs with traditional incandescent sources as they are dimmed. (Available with 2200K-3000K)

Scheduled White
Scheduled White creates an environment that mimics the rhythm of natural light or follows an alternative user-defined schedule throughout the day, enhancing an occupant’s mood and well-being. (Available with 2700K-5000K or 2700K-6500K)

Tunable White
Tunable White offers you the ability to tailor correlated color temperature (CCT) to your personal preference, enhancing task visibility, material and colors and the aesthetics of the space. (Available with 2700K-5000K or 2700K-6500K)
Your Experience.

Create your experience with the intuitive, not the intimidating. SpectraSync™ technology operates on standard 0-10V dimming protocols with presets and scheduling for simplified configuration and commissioning.
SpectraSync™ Color Tuning Technology enables dynamic control over the lighting of indoor spaces. Studies suggest that the discerning control of lighting spectrum and intensity over time can potentially enhance human health, behavior and our general sense of well-being.

SpectraSync™ capitalizes on the innate, biophilic human need for the comfort derived through connection with familiar, natural environments, potentially leading to improved productivity and stress reduction. Our goal is to equip lighting professionals with the tools needed to implement human-centric strategies that promote wellness and balance.

Hospitality
Provides flexibility to create multiple environments, whether multi-use spaces, common areas or guest suites.

Education
Empowers educators to tailor active environments and create a productive academic experience.

Office
Customizes office space for personnel and business needs.

Health & Wellness
Enhances the well-being of patients while balancing the requirements of the health care provider.
SpectraSync™ Dim to Warm links us back to a time when incandescent and halogen light sources would naturally "warm up" when dimmed down. The effect mimics sunset, creating a calming atmosphere within your space. Dim to Warm is ideal for applications such as hospitality, long-term healthcare, retail and residential spaces where warmer color temperatures put the finishing touches on a well-designed space.

Scheduled White

SpectraSync™ Scheduled White brings the rhythm of nature indoors by enabling CCT and intensity control throughout your day with a straightforward 0-10V interface. Emulating nature, or augmenting it, may promote a sense of well-being in a variety of applications from offices to classrooms to healthcare environments.

**Columbia LIGHTING**
Simple Control Solutions

Hubbell Control Solutions’ NX Distributed Intelligence™ lighting control system utilizes a Distributed Network Architecture (DNA) that connects intelligent devices including luminaires, controllers, panels, occupancy sensors, photocells, wall switches and dimmers, all of which create a system with an unmatched level of reliability, scalability and simplicity.

When paired with SpectraSync™ enabled luminaires, NX delivers a comprehensive color control solution, simplifying setup and code compliance through self-configuration and an optional Bluetooth® interface with mobile application.

- Complete control solutions for applications using SpectraSync color tuning technology
- Simplified installation with device auto-configuration and plug-n-play connectivity
- Free Bluetooth® enabled mobile app for ease of configuration
  - Available for both iOS and Android devices
- Intuitive app interface and user-friendly wall stations for precise control

Typical NX Distributed Intelligence Layout for In-fixture Control
Third Party Controls
To facilitate compatibility with third parties, SpectraSync™ color tuning technology provides designers with a flexible and elegant approach for control, from simple wall box dimmers to complex programmable systems using standard 0-10V control protocol.
