## Motion Activated Surface Mount

---

Illuminate your space with confidence and efficiency with the dual technology 7.72 inch Surface Mount LED Light, an intelligent lighting solution that combines motion-sensor technology with energy-saving design. This sleek disk light is activated when motion is detected from its built-in PIR (Passive Infrared) sensor. When darkness falls and motion is detected, it seamlessly illuminates the area. The integrated photocell ensures that the light only activates when ambient light levels are insufficient, preventing unnecessary energy consumption. Powered by innovative LED technology, this fixture emits a warm 3000K light with a high 90 CRI through a polycarbonate lens without harsh glare or dark spots. Choose a crisp Satin White to seamlessly match your interior decor.
