To Whom it May Concern

Raw Material Inspection Declaration

The metallic alloys used to manufacture Hawke International products is closely controlled through supplier inspection certificates.

This statement confirms that all Brass CZ121/W614N alloy used to manufacture brass Hawke International products is supplied with traceable test certificate 2.2 to EN 10204.

This statement further confirms that all Stainless Steel 316 Alloy used to manufacture stainless steel Hawke International products is supplied with traceable test certificate 3.1 to EN 10204.

All suppliers of raw materials to Hawke International have fully traceable QA systems in place (at least ISO 9001). This general statement is issued as, due to the volume manufacture nature of Hawke International products, it is not always possible to trace a manufactured product back to a specific delivery of raw material alloy.

Please do not hesitate to contact Hawke International if any further clarification is required.
