Fluorescent and LED Fixture Slide Dimmer

Single Pole (One location) or 3-Way (Multi-location) Cat. No. PSD710-UNV-ŴVL 1200VA-120VAC, 60Hz, 1500VA-277VAC, 60Hz 10A LED, 120VAC/277VAC, 60Hz 10A Electronic Ballast, 120VAC/277VAC, 60Hz 28mA Maximum Sink Current

For Use with LED fixtures using 0-10V dimmable power supply/drivers. Advance Transformer Mark 7[®] OSRAM Sylvania Quicktronic[®] Helios™ or equivalent dimmable ballasts.

Step 2

INSTALLATION INSTRUCTIONS

WARNING:

• TO AVOID FIRE, SHOCK, OR DEATH; TURN OFF POWER AT CIRCUIT BREAKER OR FUSE AND TEST THAT POWER IS OFF BEFORE WIRING **OR SERVICING FIXTURE!**

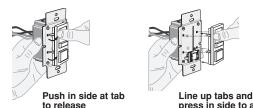

CAUTIONS:

 To avoid overheating and possible damage to this device and other equipment, use only with the appropriate LED 0-10V dimmable power supplies/ drivers, Advance Transformer 120/277V Mark 7® 0-10V ballasts or OSRAM Sylvania Quicktronic® HeliosTM electronic ballasts.

Tools needed to install your Dimmer

Changing the color of your Dimmer

Your Dimmer includes three color options. The Dimmer ships with the White frame attached. To change color of frame, proceed as follows:

press in side to attach

Note: Move slider on dimmer and slider on change kit to bottom of the slide bar prior to engaging

Installing Dimmer by itself or with other devices

If installing Dimmer in a single device application, proceed with the INSTALLING YOUR DIMMER section. If installing Dimmer in a multi-device application, proceed as follows:

MULTI-DEVICE APPLICATION:

NOTE: You only need to remove side sections if installing with other dimmers or if it does not fit in wall box – not when installing with mechanical switches.

When installing more than one dimmer in the same location, the side sections of the mounting strap must be removed. Use pliers to carefully bend side sections back and forth until they break off.

Bend back and forth to remove side section

MAXIMUM LOAD PER DIMMER FOR MULTI-DEVICE				
Cat. No.	Volts	Single	Two Gang	More than 2 Devices
PSD710-UNV-WVL	120	1200VA	1200VA	1200VA
PSD710-UNV-WVL	277	1500VA	1500VA	1500VA

MAXIMUM BULB WATTAGE:

0-10VDC ballasts are rated in Volt-Amps (VA). The maximum number of ballast per dimmer is based on the load VA rating. The maximum bulb wattage is determined by the efficiency of the ballast.

NOTE: For additional switching capacity, use dimmers in conjuction with a Leviton OPP20 120/277V Power Pack.

For applications using Leviton's OPP20 Power Pack (Shown in Wiring Diagrams 2), the OPP20 switch ratings are as follows (refer to OPP20 Instruction Sheet for additional information):

OPP20 SWITCH RATINGS:

20 Amps for 120 and 277 VAC Ballast

0-10 VDC Sink Current Rating:

28 mA maximum sink current. Contact your ballast manufacturer for the sink current rating of the ballast.

INSTALLING YOUR DIMMER

OFF

WARNING: TO AVOID FIRE, SHOCK, OR Step 1 DEATH; TURN OFF POWER at circuit breaker or fuse and test that power is off before wiring!

CAUTIONS:

- · To be installed and/or used in accordance with appropriate electrical codes and regulations.
- If you are unsure about any part of these instructions, consult an electrician.
- · Lighting fixture and dimmer must be grounded. · Use this device with copper or copper clad wire only.

Single-Pole Wiring Application: Step 4A

For single pole ins

This wire is used in 3-way installations only.

s. do not rem

(most common):

electrician.

Identifying your wiring application

NOTE: If the wiring in the wall box does not

resemble any of these configurations, consult an

3-Way

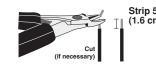

1. Load (See note below) 2. Neutral 3. Ground 4. First Traveler - note color 5. Second Traveler - note color 6. Gray (-) 7. Violet (+)

IMPORTANT: For 3-way applications, note that one of the screw terminals from the old switch being removed will usually be a different color (Black) or labeled Common. Tag that wire with electrical tape and identify as the common (Line or Load) in both the dimmer wall box and the standard 3-way switch wall box. The remaining two wires on the brass or lighter screws screw terminatls of the old switch are the travelers.

Preparing wires:

NOTE: Ensure that low-voltage wiring (for Gray and Violet connection of dimmer) is installed at wallbox that will house the PSD710-UNV-WVL Dimmer.

- · Pull off pre-cut insulation from Dimmer leads.
- Make sure that the ends of the wires from the wall box are straight (cut if necessary).
- Remove 5/8" (1.6 cm) of insulation from each wire in the wall box (shown).
- For Single-Pole Application, go to Step 4A.
- · For 3-Way Application, go to Step 4B.

- · Green dimmer Ground lead to Green or bare copper wire in wall box.
- · Black dimmer lead to Line Hot wall box wire. · Red dimmer lead without insulating label to Load wall box wire.
- Remaining Red dimmer lead should have Red insulation label affixed. NOTE: If insulating label is not affixed to Red lead, use
- a small wire nut or electrical tape to cap off.
- · Violet dimmer lead to (+) Violet connection on ballast. · Gray dimmer lead to (-) Gray connection on ballast.
- · Proceed to Step 5.

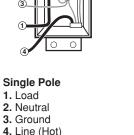

Connect wires per WIRING DIAGRAM 1 (shown on page 2) as follows:

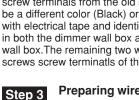

conductors show below the wire connectors. Secure

NOTE: Ensure that low-voltage wiring (for Gray and Violet connection of dimmer) is installed at wallbox that will house the PSD710-UNV-WVL Dimmer. NOTE: For additional switching capacity, use dimmers in conjuction with a Power Pack.

- Screw wire nuts on clockwise making sure no bare
- each connector with electrical tape.

2. Neutral 3. Ground 4. Line (Hot) 5. Gray (-) 6. Violet (+)

Strip 5/8' (1.6 cm)

Strip Gage

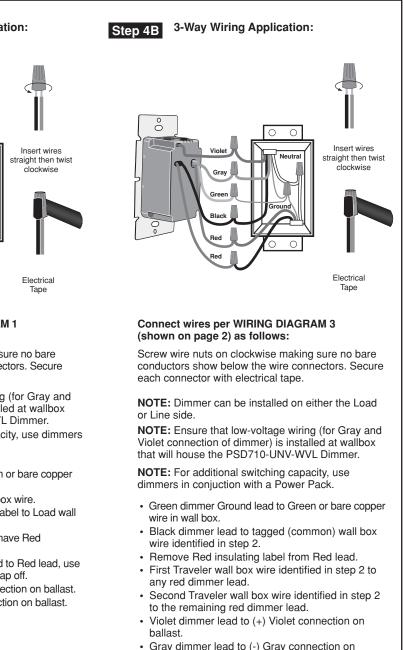

5/8"

(1.6 cm)

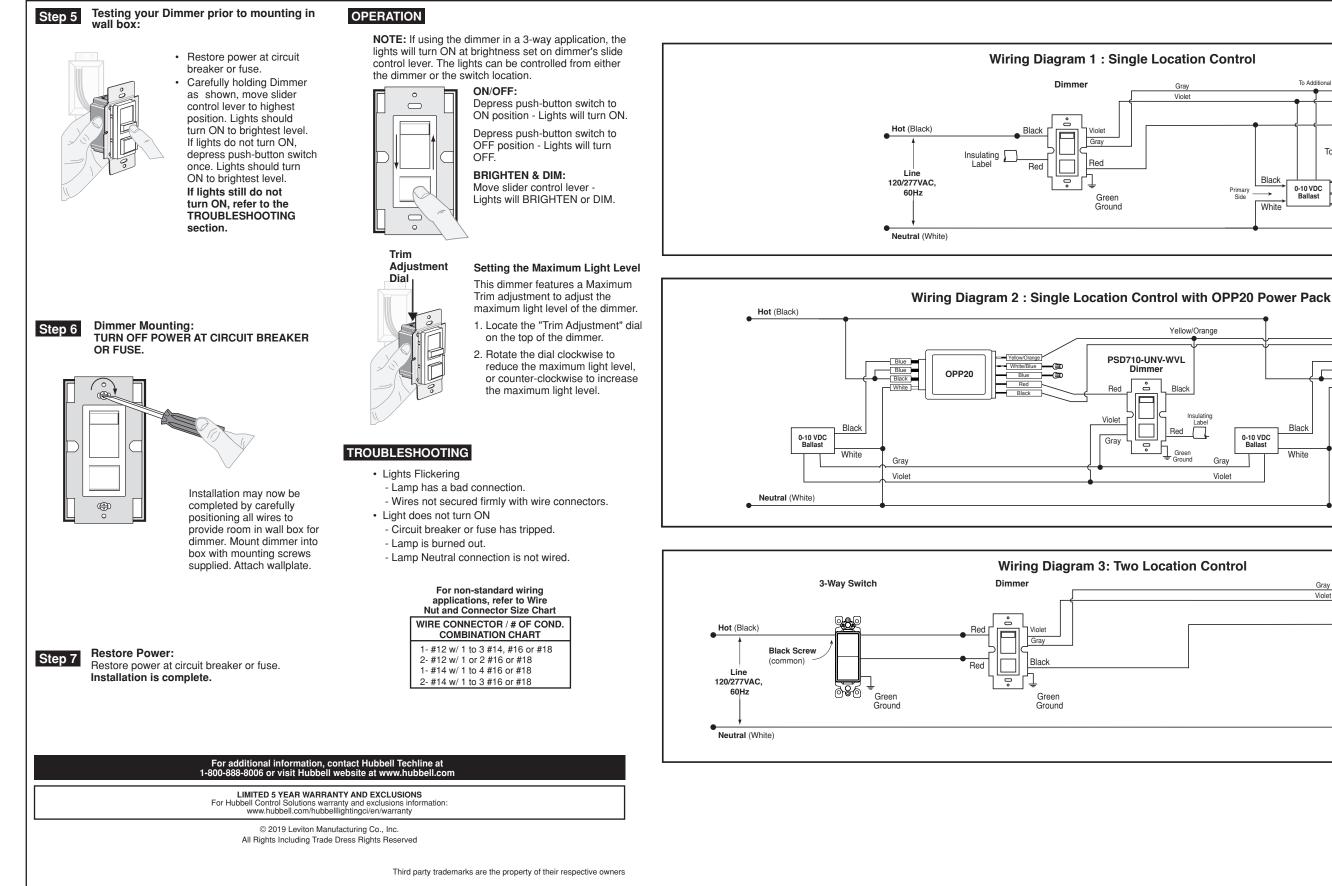

DI-421-IP710-02G-X2

NOTE: Use only one (1) dimmer in a 3- or 4-way circuit. The switch(es) will turn the light on at the brightness level selected at the dimmer.

- Gray dimmer lead to (-) Gray connection on ballast
- Proceed to Step 5.
