Assembly Instructions for: HTB Terminal

Terminal cap tightening torque: 1 to 2 Nm Operating temperature range -60°C +100°C

Terminal resistance for each pillar is 0.0003 ohms.

- Leads connected to the terminals shall have insulation 1) extending to within 3mm of the terminal throat and the bare end of each lead shall not extend more than 3mm beyond the other side of the slot and shall remain straight. Maximum stripping length 16mm.
- 2) The terminal cap of each terminal, used and unused, shall be fully tightened down by the end user. The tightening torque is 1 to 2Nm.
- 3) Conductors of different sizes and configurations shall not be inserted into the same terminal throat/slot except for the specific combinations listed in Tables 1 & 3. Even distribution of conductors required to ensure all conductors are under compression.
- When installed in an enclosure the creepage and clearance 4) distances between the terminals, adjacent equipment and enclosure walls must comply with the requirements of IEC/EN 60079-7.
- When installed in plastic enclosures, there shall be at least 5) 3mm clearance between the inside of the removable cover/lid of the enclosure and the terminal screws after the connections have been made and the terminal screws and cover/lid have been fully tightened down.
- For conductor sizes less than 1mm² but not less than 6) 0.5mm², the maximum current rating shall not exceed 1 amp.
- 7) The service temperature range must not exceed -60°C to +100°C.
