

Stirrup Connector

Hot-Stick Installation Instructions

Bulletin # 004

1) Separate insert “Interface” from connector.
Do not loose the insert.

2) Read markings to verify correct wire range.

3) Gently unscrew bolt to full open position.

4) Hold center of bail in the hot-stick.

5) Flip connector over and position as pictured.

6) Position connector over main line where desired.

(CONTINUED)

(CONTINUED)

7) Lower bail into position.

8) Insert interface on Hot-Stick in the same direction that it will be inserted into the connection. This will allow easy Hot-Stick removal.

9) Tighten Hot-Stick on Interface.

10) Slide interface along main wire and into the connector until it reaches the stop.

11) Release interface from Hot-Stick.

12) Use a universal socket stick and 3/4" socket to tighten bolt until Hex Head shears off. The bolt should break off at 110-130 INLBS (12-14 NM)
