SmartFCI™ Pilot Kit

How you benefit with our pilot program

This self-contained kit lets you install and start using our solution immediately for evaluation. It also provides a simple stepping stone to seamlessly progress to expanded deployments.

- Simple, powerful, easy to install
- Best in class advanced FCI
- 0 Amp operation – can be used to monitor load and fault events throughout distribution and sub-transmission circuits, including low current laterals and end-of-feeder locations.
- Quickly locate faults and momentaries remotely via alarm messages or locally with integrated high-visibility LEDs
- Report transient faults and fault waveforms to identify and troubleshoot developing faults for proactive maintenance
- Works with Aclara Grid Monitoring products, including the Sensor Management System (SMS) software
- Supports DNP3 integration with SCADA systems
- Integrated wireless communications

Pilot kit includes

- 24 Aclara SmartFCI units
- 1-year Aclara cloud-based SMS software*
- 1-year Aclara Wireless Network (AWN) cellular service
- Support for setup and initial training

* Pilot kit provided on a multi-tenant environment. We can also quote similar dedicated services as a cloud-based or on-premises implementation supporting SCADA integrations.
