

PROVIDING A QUICK-LINK TO SAVINGS AND CONVENIENCE

SINCE 1999, THE PCORE QUICK-LINK BUSHING TECHNOLOGY KEEPS ADVANCING:

- Now available in both PRC® and POC® technologies up through 138kV and has the convenience of a draw-lead bushing with the current carrying capability of a bottom connected bushing.
- Allows bushings with current ratings up through 5,000 amps to be installed and removed from transformers without lowering the oil level in the transformer. This results in significant cost savings to the end-user.
- Has a proven multiple contact connector that transfers current from the bottom terminal to the bushing conductor.
- Has no internal connections that could loosen or overheat.
- Has a rod that is much lighter than typical draw-leads or draw-rods, making installation and removal more convenient.

For more information about PCORE products & services, contact your local Hubbell representative, call our factory at 585-768-1200, or visit:
