

Labeled Subplate Kits for Floor Boxes and Fire-Rated Poke-Throughs

Identify Ports Faster, More Accurately

Quickly and easily identify individual ports in Recessed Floor Boxes and Fire-Rated Poke-Throughs (FRPT). Our labeled subplate kits save time for installers, provide consistency for engineers, and provide reliable port identification for end users.

The Hubbell subplate labeling system provides a dependable process for installers to identify ports and the type of service they provide, such as phone, data, or power. No need to use commercial label makers, which can lead to unreliable placement or identification.

AV engineers can ensure they will have properly marked ports for their customers. Building staff or outside contractors can quickly identify the name of the port for maintenance or changes.

Our labeling system is durable and dynamic. It allows for quick change or reidentification of the service without damaging the subplates. Label holders snap into the subplates, ensuring accurate placement. Plate knockouts are field removable to allow for post-installation expansion or changes.

Subplates ship with 1 or 2 openings and 3 to 4 ports knockouts. The open system subplates can be used with snap-in jacks which require 0.760" high x 0.600" wide jack openings.

FBMP6DJ subplate is for use with CFB2Gxx, CFB4Gxx, CFB6Gxx, AFB2Gxx and AFB4Gxx Series Floor Boxes.

S1R6SP6DJ subplate is for use with S1R6PTxx Series Fire-Rated Poke-Throughs Series.

S1R8CSP4DJ and S1R8CSP6DJ subplates are for use with S1R8PTxx Series Fire-Rated Poke-Throughs.

Each subplate kit includes: 1) label holder which snaps into the subplates, (8) white label inserts and (8) clear label covers. Extra label inserts and clear label covers are included to ensure the installers have what they need until the job is completed.

FEATURES
