

BSDCCEE C-Clamp for Bonding and Grounding Containers

BURNDY®, The Grounding SuperStore, is offering a new "C" clamp that may be used to attach static discharge conductors to containers. The clamp is needed to provide contact between containers or from a container to a grounding grid. This helps ensure all containers are grounded while being used for dispensing flammable or combustible fluids. To provide contact, a galvanized or stainless steel cable of 1/8" diameter is generally used and crimped to the ring terminal fastened to the screw provided with the clamp.
