

Copper FASTAP™ with Lineman Assist™ Expansion

Stainless Steel and Shear Nut Hardware Options now available

BURNDY® is pleased to announce the expansion of the Copper FASTAP™ product line to now include versions with all stainless steel hardware and a silicon bronze shear nut. Both options still utilize the same features of the standard line including Lineman Assist™ that uses a spring to hold the conductors to simplify installation.

The all stainless steel hardware connectors offer a lower cost version of Copper FASTAP™ while still maintaining the strong corrosion resistance when connecting copper to copper in corrosive environments. The two new connectors are:

UCT26SS

UCT32SS

The shear nut options simplifies installation by eliminating the need for a torque wrench to ensure proper tightening torque. Simply tighten the nut using a wrench until the top half shears off. The two new connectors are:

UCT26HN

UCT32HN

Copper FASTAP™ is an ideal solution for connecting copper wires quickly, reliably, and safely. With the duckbill and spring assist, Copper FASTAP™ allows line workers to easily handle the connector with dielectric gloves in cold, wet, and icy environments making the connector ideal for storm restoration and everyday use.
