

FASTAP™ with Lineman Assist™ Expansion

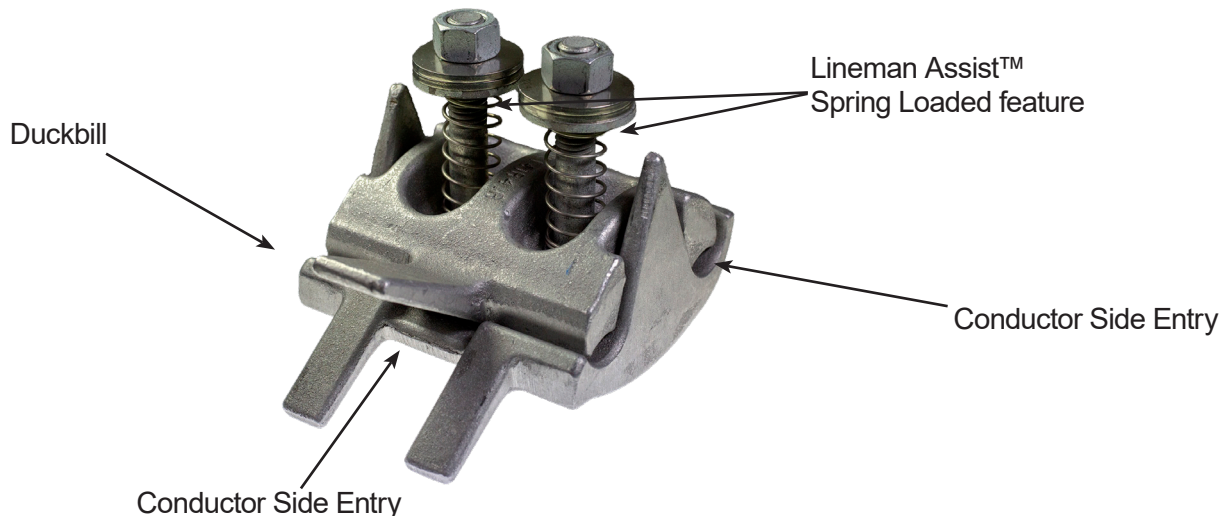

A Novel Solution to an Age Old Problem

BURNDY® is proud to announce the expansion of FASTAP™ with Lineman Assist™ to accommodate larger conductors. With two new sizes FASTAP™ can now accommodate conductors from #8 Sol to 556 (30/7) ACSR. These two new sizes utilize the same novel features of FASTAP™ to make tapping and low tension splice of utility primary wires fast, reliable, and safe. The Duckbill feature allows the line worker to easily grip and install the connector while wearing dielectric gloves. The spring-loaded feature holds both the Tap and Run conductors so that the line worker can focus on finishing the installation without having to worry about the conductors falling out.

Like the existing FASTAP™ line, the new sizes come with different options. The basic option does not include PENETROX™ oxide inhibitor. The most common option is prefilled with PENETROX™ oxide inhibitor to improve performance and extend the life of the connection. Both of these options utilize galvanized steel hardware. The last option is prefilled with PENETROX™ inhibitor but also comes with stainless hardware for use in marine environments.

With increased visibility from the public during storm restorations, utilities are looking for solutions that quickly restore power in a safe, reliable, and cost-effective way. The FASTAP™ Duckbill feature allows linemen to easily handle the connector with dielectric gloves in cold, wet, and icy environments. Add in the Lineman Assist™ feature and linemen can now focus on getting the lights back on and not worry about the conductor falling out prior to tightening.
