

The Wiley WEEB: It's What's In Store

When it comes to harnessing renewable energy, more businesses are finding that the answer is right in front of them. *Well, right above them.*

Atop buildings nationwide, the Wiley WEEB (Washer, Electrical Equipment Bond)

has been revolutionizing the installation of PV systems—making solar projects more viable.

For example, BURNDY has supplied the WEEB solution to help IKEA reach its goal of producing 100% of the energy consumed by its stores from renewable sources by 2020. Through the Wiley WEEB's simple, reliable and low-cost method of bonding PV module frames and racking systems together, **installers save up to at least two minutes of installation time on each PV module.** And when you're talking about dozens of projects (IKEA just finished its 39th nationwide), that time adds up.

That's just one more way BURNDY and the Wiley WEEB are on the top of the retail world—or at least the buildings.

Making Your World Sustainable
