BURNDY® announces the introduction of the PATMD-ALLIF PATRIOT® IN-LINE® Pole Cutter / Crimper Tool, designed for use in extended reach, “live-line, hot-sticking” applications working from inside the aerial bucket or from solid ground.

An industry first, this unique design builds upon the original BURNDY PATMD IN-LINE battery tool platform, bringing control to your fingertips while working with hard to reach, energized overhead or underground lines. Designed for safety, convenience and function, the PATMD-ALLIF battery-operated tool performs cuts in seconds and eliminates the exertion and energy required using similar manual or ratchet type models.

Its balanced weight distribution allows for a more ergonomic experience versus similar tools on the market where the majority of the weight is at the top of the pole.

With interchangeable heads, this one tool can accommodate most of your long reach cutting and crimping requirements.
