General Information

The Model BB133 Battery Backup Kit is designed for use in the Model 1335x, 1336x, and 1337x series of Addressable Speaker Assemblies. This kit includes the following components:

<table>
<thead>
<tr>
<th>Qty</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Battery, 12 V, 2.8Ah</td>
</tr>
<tr>
<td>1</td>
<td>Battery bracket</td>
</tr>
<tr>
<td>1</td>
<td>Screw, #6-32 x .25-inch</td>
</tr>
</tbody>
</table>

NOTE: The 2.8 Ah battery should be fully charged prior to installation in an Addressable Amplified Speaker that is equipped with the low battery monitor feature and programmed for its use. Charger No. 40408-009 may be purchased separately.

Installation

1. Remove the speaker from the carton and position on a flat surface with the front of the speaker facing upward.

2. Back out the screws on all sides of the speaker (only the left and right screws are fastened on new units). All screws are captive and will remain in the front section. Lift the front section straight up and flip to the left-hand side of the rear section. Refer to Figure 1.

3. Remove the battery backup kit from its packaging. See note above.

4. Slide the battery into the bracket, observing the positioning to properly expose the connection terminals. The bracket is designed to fit snugly over the battery. With the mounting tab positioned on top of the battery, the positive terminal must be positioned to the right. Refer to Figure 1.
5. Slide the battery/bracket assembly into the mounting slot on the front section panel, directly below the speaker. Assemble the screw through the bracket and secure into the panel.

6. Attach the quick-connect fastons of red (+) and black (-) leads from the wiring harness to the battery. **Be certain to match each lead with the appropriate terminal on the battery.**

7. If permanently installing the Addressable Amplified Speaker at this time, please refer to the Mounting section of GAI-Tronics Pub. 43004-034.

8. If using the Addressable Amplified Speaker with temporary battery power, reassemble the speaker sections, taking care not to pinch wires between the two sections. Tighten the front panel screws to 16 to 20 in-lbs. of torque.
