

Commander Telephone

IMPROVED PRODUCT OFFERING!

To **better serve the needs of our customers** we are retiring specific Commander auto-dial button configurations.

To replace 1 button auto-dial models, **we recommend 0 or CB/Ringdown models** with the user programming the device to auto-dial when the handset is lifted.

To replace 3 button auto-dial models, **we recommend 6 button models** with the user either labeling only the buttons used and not programming the spare buttons or repeat program the spare buttons and label accordingly.

For 15 button keypad versions **we recommend the 18 button keypad** and either the 3 programmable buttons are not programmed or the user may opt to program three (3) commonly used numbers.

0 button CB/Ringdown, 6 button and **18 button keypad** versions are available for the same price as the keypad variants they replace.

Auto-dial telephones enable the user to program defined push-buttons to dial pre-defined numbers, limiting calling access and providing direct dialing.
