Improve Productivity and Safety in the Workplace

Ergonomics Pays Dividends

If your company assembles, ships, or has an office, paying attention to workplace ergonomics increases productivity, reduces comp claims and costs, and improves employee morale. Few tasks in the average workplace are the same and no two workers are identical. Hubbell Workplace Solutions workstation systems are fully adjustable to fit any task and any worker. We do not make workbenches. We specialize in workstation kits, components and accessories that can be affixed to or used with new or existing benches, conveyors or other work areas.

Retrofit your old work benches

Don't throw away those old but sturdy work benches just because they're not fully equipped. You don't need to buy new benches to make your workplace safe and efficient.

Available in a variety of styles and sizes, with several mounting options, Hubbell Workplace Solutions workstation kits will fit virtually any existing bench, at a cost so low it will surprise you.

- Minimum down time
- Minimum expense

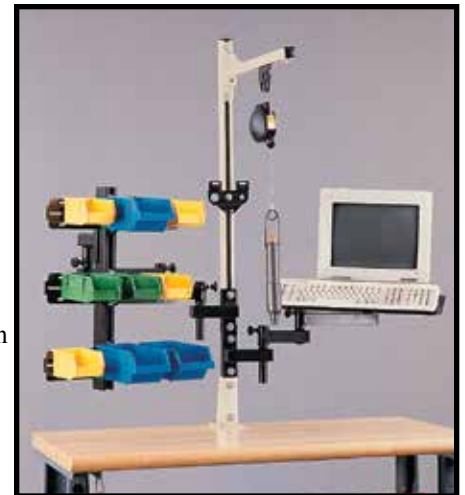

Dual Column Workstation Kits

Available with two straight or one curved tool rail, a choice of three mounting bases and a range of sizes. Easily accessorized with work lights, air manifolds, swing arms, bars to hold bin boxes, etc. Kits are shipped fully or partially assembled and include all hardware.

Single Column Workstation Kits

The efficient and economical way to meet ergonomic requirements. Each kit includes fixed or swing boom, trolley, tool balancer and sturdy mounting base. A variety of swing arms, two shown at right, may be added to make workstation even more functional.

Jibs

Bench, Floor or Ceiling Mounted

Assembly lines or floor based maintenance areas may be better served by swinging or fixed jibs rather than traditional work benches. If jibs are the answer to your workstation problem, Hubbell Workplace Solutions has a full range of sizes and styles with capacities from 30 to 300 lbs. The ceiling mounted style is especially suited to situations where the entire floor area must be kept clear. Overhead tool cranes are also available. Most booms are available without columns for wall or building column mounting.

Tool Balancers

Make Tools Virtually Weightless

Three types of balancers handle tools from 0.5 lbs. to 187 lbs. All feature rugged housings, easy adjustment and steel cables. Complete range of accessories including safety cables, hanger clevises, etc. Retractors and Torque Reels available for specialized applications. Now offering Hose Reel Balancers for air tools.

Torq-Arms™ & Tool Positioners

Neutralize Torque, Eliminate Tool Lifting

Available for either air or electric tools, torque neutralizing arms and tool positioners support the weight of the tool and allow easy tool positioning while preventing transmission of rotational forces to workers hands or wrists. May be mounted to bench tops or added to single or dual column workstations.

Other Productivity Improvement Tools

The unparalleled flexibility of the workstation construction system has led to unique kits that have found extreme usefulness in many situations. More information on these and additional kits is available on our web site: www.hubbell-gleason.com.

Push 'n Place™ Mobile Workstation

Here's a way to maintain flexibility on the plant floor without sacrificing safety and productivity. Rolls easily to work benches, tables, conveyors, anywhere you need overhead support for tools. Includes air manifold which, when fitted with quick disconnect, can be hooked to air supply at the site.

Place 'n Pick™ Shelf Cart

Whether the shelves are used for holding bins, as shown, work in process, or are put to some other use, this versatile cart is handy to have around. Available in four widths (30"-60"), the shelves may be mounted sloped or level and heights are fully adjustable. Includes four locking casters.

Supply 'n Return Feed Cart

- Bring parts bins to work station
- Return bins to aisle
- Roll where needed

Feature three levels of conveyors; two for supplying full bins to assembly area and one for returning empty bins to aisle for easy pick-up. May also be assembled with all three conveyors sloping toward work area. Sturdy extruded aluminum frame with heavy steel brackets and four locking casters.

Gravity Feed Rack

- Heavy-duty construction for large parts bins
- Available in several widths
- Fully adjustable

Economical way to place parts bins within easy reach of assemblers. Position rack, adjust height and slope of conveyors and you are ready for production. Variety of widths - there is a rack available for any standard-size work bench. Extruded aluminum and steel frame

Organize Your Work Site

Qualtech™ Information, Documentation & Inspection Stands

INFORMATION STANDS

Feature 3-ring binder mechanisms to hold routing sheets, assembly details, etc. Available in several sizes and configurations. Standard models include steel pedestals with glides. Deluxe units include adjustable height stand with casters, locking storage compartment, and side tray. Panels are yellow high impact polystyrene.

INSPECTION STANDS

Include a cushioned work surface and back display panel with two clips for drawings. Deluxe version includes four locking casters, utility drawer, and clear hinged acrylic panels on display panel. Standard model has four glides.

DOCUMENT STANDS

Available in a wide range of sizes and configurations. All models have a writing surface with two clips and hinged, clear document protector. Wall mounted unit also available.

KAIZEN EVENT DISPLAY STAND

Designed for Kaizen Planning Events, this “D” sized display will find multiple uses around the shop and office, wherever small group communication is necessary. It comes supplied with one laminated “D” size planning chart (for wipe-off markers) and five pre-printed paper charts. Three clips hold charts securely in place and a handy tray keeps markers within reach.

SHIPPING / PACKAGING WORKSTATION

Speed your shipments out the door. Shipping station kit was designed with utility and flexibility in mind. Features strong extruded aluminum frame, laminate wood work surface, light with four 48" fluorescent tubes, packaging foam dispenser with cutting bar, adjustable shelf with room for label printers, power strip, swing arm mounted monitor and printer trays. May be assembled in a variety of configurations to fit your space and job requirements.
