

Support devices in exposed work applications with updated RACO® Crushed Corner Covers

Contractors safely install devices in exposed work by using covers designed for surface mount boxes. Updated Crushed Corner Covers from Hubbell RACO® make for easier installation in exposed applications.

These exposed surface covers include nuts to attach switches or receptacles to exposed 4" square surface mount boxes. Different designs support a variety of one or two toggle switches, duplex receptacles, GFCI receptacles, round single receptacles, or a combination. The crushed corner design simplifies screwing the cover to the box.

No bonding jumpers are required for exposed work covers with crushed corners when devices are attached by screws without insulating washers. RACO®'s cULus Listed crushed corner covers meet the requirements of NEC 250.146A.

For more information about new crushed corner covers from Hubbell RACO®, contact your Hubbell sales representative or visit hubbell.com/raco.
