

PRODUCT ANNOUNCEMENT

New RACO raintight compression connectors

Now with extended thread for thicker boxes

July 22, 2024

To RACO's agent principals and the outside sales team:

Great news for raintight and solar applications! Hubbell RACO is expanding the line of EMT raintight compression connectors.

Our new RACO raintight compression connectors with extended thread fittings have the same high-quality construction and UL certifications as our current products, but are 1/2 inch longer. The extra length creates a flush installation for thicker boxes, such as Enphase combiners.

Catalog numbers for the new fittings are 2903RTE and 2904RTE. All SKUs of RACO raintight connectors are open to order now with inventory available.

Here's what's in the launch package — 25 brochures for new products 2903RTE and 2904RTE along with a sample of each new fitting. We'll also be sending out an email to end users to help generate awareness.
