Design your enclosure easily with Wiegmann's new Enclosure Configurator

For electrical enclosures, one size does not fit all applications. The new Wiegmann Enclosure Configurator allows customers to easily design their own enclosure online. It saves weeks in the design and quoting process.

Customers have counted on Wiegmann for years to design and build custom enclosures to specific requirements. However, the process of getting from a napkin sketch to finished engineering drawings and a quote used to take a great deal of time. Identifying, designing, quoting, and approving custom products required a lot of back-and-forth communications.

The new online tool makes the process quick and easy. Users follow simple on-screen steps to design their custom enclosure in just minutes. The configurator builds out the drawings in near real time, no additional approvals needed. Then clicking a button submits the design for a price quote.

Every aspect of an enclosure can be customized. Dimensions, material, back panels, the type and position of holes and cutouts, handles or latches, windows, paint colors, and installed accessories.

Until now, specialized CAD and engineering training was needed to design even the simplest electrical enclosure. Wiegmann's configurator allows everyone to dream up and create the exact enclosure they need for any application. The customer designs it and Wiegmann builds it—it's just that simple.
