

Space Control

Hubbell Room C

Distributed Control

Centralized Control

Load:Logic[®] Controller

Distributed Intelligence

- The Load:Logic[®] Room Controller is a microprocessor based unit that interfaces with sensing devices, such as occupancy sensors and photocells, smart switches, dimmers and load control receptacles by means of RJ45 connections.
- The controller optimizes a full range of control functions such as switching, daylight harvesting, and dimming required in an occupied space.

Flexible Control

- The controller intelligently recognizes connected devices and assigns the most energy efficient operation mode.
- The Load:Logic Room Controller can be installed individually or in combination with other room controllers.
- Contains two independently controlled relays.
- A dimming version featuring two 0-10V channels for a full range of control is also available.

Easy to Use

- Integrates automatic and manual control of lighting with the simplicity of plug-in installation.
- The controller's intelligent RJ45 ports reduce wiring errors and provide auto-configuration of sensors and switches.

Increase Control

- Comprehensive configuration of functions through Bluetooth[®] technology and a free app available for Android[®] and iOS[®] devices.
- The controller automatically identifies devices as they are connected, and only shows connected devices for configuration.
- Foundation of a self-contained, scalable system delivers everything required for efficient control of a space.

Hubbell Load:Logic® Room Controller

Meet Energy Efficiency Standards

Easy selection of controllers with preconfigured operational modes in accordance with the latest energy codes and standards.

Create Your Own Atmosphere

Includes options to enhance your personal experience with dimmers, preset light levels, customized light output, daylight harvesting, and more.

Manual Control

Addressable Smart Switches that require no configuration out of the box, yet can be configured easily to your requirements.

Effortless Experience Customization

The Load:Logic Room Controller NX App features a point-and-drop user interface, as found in today's iOS and Android devices. Only connected devices are shown for configuration.

Basic System Configuration

Classroom or Office with Automatic Receptacle Control

Note: Some devices require HBLRJ45A10 and/or BR241444 adapters to interface with the room controller. See ordering information for more details.

Flexibility

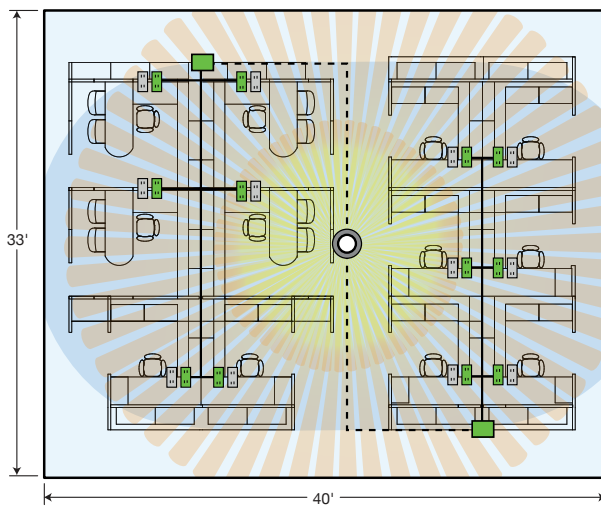

Smart devices provide manual control and simple integration with external systems, such as HVAC and AV.

Beyond Lighting Control

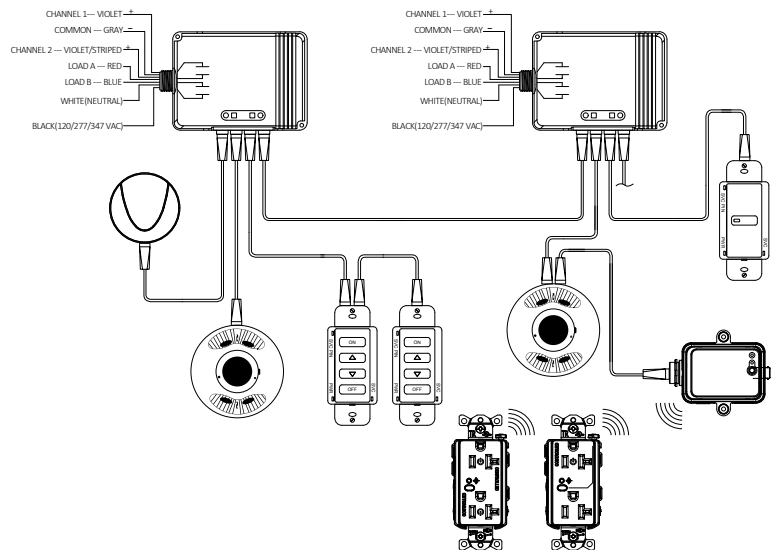

Hubbell Wiring Device-Kellems' comprehensive offering of Automatic Receptacle Control, wireless devices and HVAC and AV integration solutions complete the Load:Logic Room Controller system.

Open Space with 2 Lighting Circuits and ARC

Computer Lab with 2 Lighting Circuits and Wireless ARC

Note: Some devices require HBLRJ45A10 and/or BR241444 adapters to interface with the room controller. See ordering information for more details.

Ordering Information

Selecting Load:Logic - Easy as 1, 2, 3

- 1 Select the room controller
- 2 Select the appropriate sensors
- 3 Select the required smart switch
- 4 Select a wired or wireless switched receptacle for Automatic Receptacle Control, if required
- 5 Select desired interface cards (output to HVAC, wireless output, etc)
