

UNIRAP Plastic Lashing Strap

Heavy-duty, all-purpose cable tie reel

50 ft Reel Catalog ID: C50PLLC

Be prepared for any kind of environment. Burndy UNIRAP™ C50PLLC cable tie lashing straps are the all-purpose alternative to stainless steel cable ties and lashings.

Lashing straps are used with CBPLLC buckles and spacers to secure cable to messenger strand in communications and catenary systems.

The Burndy UNIRAP strap reel offers durable, reliable, and weather-resistant strap and head made of tough acetal plastic, which can be used in extreme weather conditions, to -40°F.

UNIRAP strapping resists UV, chemicals, and environmental hazards, plus it's halogen-free, making it suitable for all power and communications applications. With high tensile strength and impact resistance, it's specifically designed for reliable connections with stainless steel locking barb buckles.

Use the PSC2170130 strap tensioning tool for tensioning and cutting excess strap material.

Features

- Loop strength up to 250 lbs.
- UV-resistant and halogen-free
- Cut-to-length reel to accommodate larger bundle diameters
- Rounded cable edges

Benefits

- Resists degradation due to aging and UV light
- Smaller inventory footprint than common cable ties
- Reduces installation costs vs. single cable ties
- Reduces excess waste when cutting to length

CBPLLC - Buckle

- Black acetal plastic
- UV-resistant
- Halogen-free
- Stainless steel locking barb
