Cradle

by CHANCE Utility
Catalog ID: H18406

TRANSMISSION INSULATOR SLIDE CRADLE 6FT, This Chance Insulator Cradle is used to make insulator changes by supporting the string while damaged insulators are replaced, or to pivot the string so that it may be removed and lowered to the ground. On deadends or running corners these cradles are used in conjunction with strain carriers- and in straight suspensions they are used with various types of link sticks or adjustable strain pole assemblies. Insulator Cradles are made with three 1 1/2" dia. Epoxiglas® poles. Light in weight, they are easy to handle and adaptable to many applications. Lugs located at the forward end of the cradle are used to support the insulator string with a pair of wire tongs or link sticks. The back end of the cradle is supported by ropes tied at the structure. Hinged in this manner the insulators may be lowered or raised to the best position for changing damaged insulators. In some cases, the cradle is supported in eyes located on the forward yoke of Two-Pole Strain Carriers. This is done when raising or lowering of the insulator string is unnecessary.

Product Details

General

Number of Bells	10 10" Insulators
Style	Transmission; 69 kV to 115 kV
UPC	096359039198

Dimensions

Length	72 in
Weight	19.75 lb
