

LX-908 Remote Alarm Panel

By Metron/Metron-Eledyne

LX-908 Remote Alarm Panels are designed to meet the NFPA 20 specifications requiring a remote alarm panel when the pump house or pump room is not constantly attended. These alarm panels can be used with electric motor driven or diesel engine driven fire pump controllers. The alarm panel should be installed in a location that is under supervision at all times. LX-908 alarm panels make use of a solid state printed circuit board which provides reliable and trouble free service. The enclosures are Type 1 for indoor wall mounting. Mounted on the door are the pilot lights for visible alarm indication, the audible device for alarm indication, the "Silence Alarm" pushbutton and the "Push-To-Test" pushbutton.
